

The Guided Growth™ System

eight-Plate®

quad-Plate™

The Guided Growth™ System eight-Plate® and quad-Plate™

An extra-periosteal plate that uses the robust growth potential of the child's physis to gently guide correction of angular deformity.

Not an actual patient

Early Intervention for the Correc

The **quad-Plate™** addition to the Orthofix Guided Growth™ System is designed to provide you more surgical options in the treatment of pediatric angular deformities.

Guided Growth is accomplished with reversible, minimally invasive, extra-periosteal correction at or near the CORA by tethering, not compressing, the child's physis.

Diverging screws that function like a hinge to avoid physis compression.

The comprehensive Guided Growth™ System contains multiple plate sizes, along with cannulated and solid screw options to provide gentle, early intervention for patients as young as 18 months.

Solid and cannulated screw options

Correction of Angular Limb Deformities
